
1. Superficial Laser Absorption
2. Destroyed Melanocyte Cells
3. Epidermal Hypopigmentation Zone
4. Reactive Inflamatory Hyperpigmentation
6. Deep Intact Ink

1. Superficial Laser Absorption
2. Destroyed Melanocyte Cells
3. Epidermal Hypopigmentation Zone
4. Thermally Scarred Dermal Tissue
6. Deep Intact Ink

Improper wavelengths destroy epidermal melanocytes resulting in hypopigmentation and dermal scarring.

PROTECT THE EPIDERMIS
